 The argument should be
 one of these strings
 0 or any number to do the reboot
 1 or an array which contains a number
 or a string to reboot
 -1 to reboot now

 -2 to do the reboot later

 -3 to do the reboot later with arguments

 -4 to do the reboot later and specify the amount of time in hours and minutes the user waits to reboot

 If you do not want the service pack installed
 and you want to disable the reboot, you should use

 You can get the information above by running
 the following command in a command window:
nircmd /?

 For more information about nircmd you can run the following command:
/?
